DETAILED ACTION

Election/Restrictions

1. Restriction to one of the following inventions is required under 35 U.S.C. 121:
 - I. Claims 1-6 and 12-13 are drawn to a method for determining an optimal classifier model for a pattern recognition system, classified in class 382, subclass 159.
 - II. Claims 7-11, 14-16 and 17-21 are drawn to a method of automatically updating a pattern recognition classifier with respect to cluster analysis, classified in class 382, subclass 225.

Inventions are distinct, each from the other because of the following reasons:

Inventions I and II are related as subcombinations disclosed as usable together in a single combination. The subcombinations are distinct if they do not overlap in scope and are not obvious variants, and if it is shown that at least one subcombination is separately usable. In the instant case, subcombination II has a separate utility such as a method of automatically updating a pattern recognition classifier with respect to cluster analysis. See MPEP § 806.05(d).

The examiner has required restriction between subcombinations usable together. Where applicant elects a subcombination and claims thereto are subsequently found allowable, any claim(s) depending from or otherwise requiring all the limitations of the allowable subcombination will be examined for patentability in accordance with 37 CFR 1.104. See MPEP § 821.04(a).

Applicant is advised that if any claim presented in a continuation or divisional application is anticipated by, or includes all the limitations of, a claim that is allowable in the present application,

Art Unit: 2624

such claim may be subject to provisional statutory and/or nonstatutory double patenting rejections over the claims of the instant application.

Therefore, inventions I and II represent inventions that are distinct for the reasons given above and have acquired a separate status in the art as shown by their different subject matter and different classification, restriction for examination purposes as indicated is proper.
